Data Privacy Policy¹

Dear participant,

You have volunteered to participate in this study. Here you will now receive some information about the data privacy regulations for the collected data. Please read the following sections carefully.

1) Usage and storage of your data

While the collection, use and storage of your data are done for the purpose of conducting the study in which you are currently participating, these data might also be used for other future research projects in the field of human-computer interaction, visualisation, clinical or cognitive neuroscience. This includes data from your brain and/or other behavioural measures, and may also include test results from the study you took part in, and also data such as gender and age.

By agreeing to participate, you will be making a free and generous gift for research that might help others. It is possible that some of the research conducted with your data could eventually lead to the development of new methods of studying the brain, new diagnostic tests, new drugs or other commercial products. Should this be the case, there are no plans to share any of the profits made from such products with you and you will have no ownership rights in the products. We ask for your consent to this access to your data.

2) Confidentiality of your data

To the best of our knowledge, the data we release will not contain information that can directly identify you using reasonable means. To protect your privacy, the data will be given a code, so people will not know your name or which data are yours. Your name, but also other information that can directly identify you, will be omitted. Data can only be traced back to you using information only available to the data processor (i.e. people involved in the study). This information will remain safely stored in the local research institute. The data cannot be traced back to you in reports and publications about the study. However, by using additional data linked to your name (for example EEG recordings obtained from your medical records) one could potentially associate your imaging or other information in our database back to you.

3) Access to your data for verification

Some people can access all your data at the research location, including the original data with your name. This is necessary to check whether the study is being conducted properly and reliably and to

¹Based on the standardized open-brain consent-form v1.0.1

be able to notify you and your doctor in the event of incidental findings resulting from your measurements. Persons who have access to your data for review are: the local committee that monitors the safety of the study, the data controller at the University of Stuttgart (Datenschutzbeauftragter Herr Schullerer) working for the primary investigator of the study, and local, national and international supervisory authorities. They will keep your data confidential.

4) Retention period of your data

There is no plan to delete your data as they can be re-used for legitimate research interests.

5) Withdrawing consent

You can withdraw your consent to the use of your personal data at any time. This applies to this study and also to the sharing for future research. You have however to understand that – due to data anonymization – once shared with other institutions, it is impossible to remove your data from such copies.

6) Passing on to countries outside the European Union (EU)

Your encoded data can also be accessed by and sent to countries outside the EU. This is necessary so that non-EU based scientists can run analyses to verify the scientific results produced from this study or for future unrelated research in the field of clinical and cognitive neuroscience. In those countries, the EU rules on the protection of your personal data do not apply. However, your privacy is protected by an agreement on the sharing and use of data with the same standard.

7) More information about your rights regarding the processing of the data

For general information about your rights regarding the processing of your personal data, you can consult the website of the data protection authority.

If you have questions about your rights, please contact the person responsible for the processing of your personal data. For this study, that is:

- Benedikt Ehinger (benedikt.ehinger@vis.uni-stuttgart.de)

If you have questions or complaints about the processing of your personal data, we advise you to first contact the research unit. You can also contact the Data Protection Officer of the University of Stuttgart or the Data Protection Authority of the Land Baden-Württemberg.
